

SDWOTS

SD-WAN Operations Troubleshooting and Best Practices 20.x

Duration: 5 Days

Course Overview:

This five-day course covers the new deployment, options and features of version 20.x Cisco Software-Defined WAN (SD-WAN). SD-WAN is an overlay architecture that overcomes the biggest drawbacks of traditional WAN. Students will learn how to design, configure and operate a Cisco SD-WAN utilizing any transport (MPLS, Broadband, LTE, VSAT etc.). Candidates will discuss and build an SD-WAN environment starting from Day 0 provisioning and will also be able to provide troubleshooting, management, policy control and application visibility across the enterprise network. This hands-on Course covers the Cisco SD-WAN product and contains extensive labs to reinforce the knowledge learned.

Prerequisites:

The knowledge and skills that the learner should have before attending this course are as follows:
Familiarity with WAN Networks

Who Should Attend:

The primary audience for this course is as follows:

- Engineering and Planning team evaluating WAN evolution
- Personnel involved in SD-WAN Design, Implementation and Operation
- Network Operations team with SD-WAN solution
- Cisco partners who sell and support SD-WAN solutions

Course Objectives:

Upon completing this course, the learner will be able to meet these overall objectives:

- Describe how to deploy SD-WAN
- Configure SD-WAN environment
- Deploy Plug and Play / Zero-Touch Provisioning
- Implement SD-WAN Security
- Configure SD-WAN Policies
- Deploy, maintain and troubleshoot cEdge devices
- Operate SD-WAN Devices and software
- Troubleshoot SD-WAN environment

Course Outline:

Module 1: Cisco SD-WAN Introduction

- Introduction and Background
- SD-WAN Concepts
- Solution Architecture Overview

Module 2: Cisco SD-WAN: Control Plane

- Deploying SD-WAN Control Plane
- SD-WAN Router Establishes Control Connection with vBond
- Devices and Controllers Identities
- Establishing the Control Plane
- Cisco SD-WAN Control Plane Overlay Management Protocol (OMP)
- Troubleshooting Control Connections

Module 3: Cisco SD-WAN: Data Plane

- Establishing the Data Plane

Module 4: Templates

Module 5: Policy Framework

- Control Policies
- Building, Applying, and Processing Centralized Control Policies
- Control, Data, Application Aware, VPN Membership, cFlowd, and Security Policies
 - Central and Local Control Policy
 - Central and Local Data Policy
 - Application Aware Policy
 - Creating a Centralized Policy
 - VPN Membership Policies
 - cFlowd Policy
 - Security Policies
- Application Quality of Experience

Module 6: Data Plane Troubleshooting

- Troubleshooting BFD and Data Plane Tunnels
- BFD Troubleshooting
- Control Connections Related Issues

- Firewalls – Port Requirements
- NAT – Related Problems
- OMP
- Security Configuration
- ISP Problems with DSCP 48
- cEdge: In-depth Datapath Debugging

Module 7: Troubleshooting Policies

- Control Policy Failure Scenario No. 1
- Control Policy Failure Scenario No. 2
- Troubleshooting Data Policies and App-Route Policies
 - Centralized Policies – Points of Failure
 - Example 1: vManage Policy Deployment Failure
 - Example 2: Policy Deployment on vSmart
 - Example 3: Policy Deployment on vEdge
 - Example 4: Policy Deployment on cEdge
 - Tricky Problem

Module 8: Management and Operations

- Customer Deployment
 - Use Case: Retail
- Controller Deployment
- Seamless Migration
- Multi-Segment Overlay
- Hub and Spoke Topology
- Secure Internet Access
- Cloud onRamp for SaaS
- Cloud onRamp for IaaS
- Redundancy

Module 9: SD-WAN Multi-Tenant

Appendix

- Troubleshooting Common Issues
- Interface Troubleshooting
- Troubleshoot vManage Common Issues
- Cisco SD-WAN Best Practices

Lab Outline:

Labs are designed to assure learners a whole practical experience, through the following practical activities:

- Lab 0: Access the Lab Devices
 - Task 1: Access the NterOne Lab
- Lab 1: Onboard vSmart Controller
- Lab 2: Prepare a vEdge Router for Onboarding
- Lab 3: Prepare a cEdge Router for Onboarding
- Lab 4: Add vEdge to vManage Inventory
- Lab 5: Configure and Deploy vEdge Router Control-Plane
- Lab 6: Configure and Deploy cEdge Router Control-Plane
- Lab 7: Decommission a cEdge from vManage Inventory
- Lab 8: Adding a cEdge to vManage Inventory
- Lab 9: Configure and Deploy an Overlay Network
- Lab 10: Exploring vManage GUI
- Lab 11: Provision and Deploy vManage Feature Templates
 - Task 1: Deploy Feature-Based Device Template
- Lab 12: Provision and Deploy vManage CLI Templates
- Lab 13: Provision and Deploy Policies (Part 1)
 - Task 1: Modify Controller Distribution Using a Control Policy
 - Task 2: Create a Hub and Spoke Control Policy
- Lab 14: Provision and Deploy Policies (Part 2)
 - Task 1: Create an Application Aware Routing Policy
 - Task 2: Create a Service Chain Policy
 - Task 3: Create Localized QOS Policies Using Feature Templates
- Lab 15: Verifying and Troubleshooting Data Plane Issues
 - Task 1: Verifying the Data Plane
 - Task 2: Verifying BFD Information
 - Task 3: Determining the Makeup of Network Traffic Using DPI
 - Task 4: Simulating Flows
- Lab 16: TLOC Extension
- Lab 17: Troubleshooting Methods and Tools
 - Task 1: Ping and Traceroute
 - Task 2: vManage Alarms and Events
 - Task 3: vShell
 - Task 4: Viewing System Log Files
 - Task 5: Enabling and View Debug Output
- Lab 18: Using the REST API and Python Scripting
 - Task 1: Python Installation and Introduction
 - Task 2: Examine and Run a Sample Python Script and View the Output
- Lab 19: Deploy Multitenant vManage
 - Task 1: Deploy Multitenant vManage
 - Task 2: Install vManage Certificates
 - Task 3: Add vBond Controller and Install Certificates
 - Task 4: Add a Tenant in vManage
 - Task 5: Access vManage as a Tenant
